

ABOUT NOORSAT

NOORSAT W.L.L. is a premier provider of satellite services to the Arab World, Central Asia and parts of Europe. Our extensive satellite capacity, modern ground infrastructure and in-depth knowledge of the region enable us to meet the increasing demands of this dynamic market and its future applications. We have been dedicated to delivering capacity for high quality services to our customers for a decade, and we look forward to building on this strong foundation.

NOORSAT provides users with highly reliable Direct-to-Home (DTH) TV services from the only two Hotspots serving the Arab World. Furthermore, NOORSAT provides satellite capacities to serve the increased demand for all other types of telecom services including Video, Telephony and Internet.

Our outstanding customer care and state-of-the-art facilities enable us to offer impeccable service delivery.

Global Satellite Communications

Broadcast Services

Direct-To-Home (DTH) TV

NOORSAT offers Standard Definition (SD) and High Definition (HD) DTH TV services from the only two Hotspots serving the Arab World, currently carrying more than 300 Free-To-Air (FTA) TV, Pay-TV (PTV) and Radio channels.

Hotspot 7/8° West

The NOORSAT 7 (E7WA) satellite gives unmatched power and full coverage of the entire Arab World. NOORSAT has expanded its capacities to include the NOORSAT 7B (E8WB) satellite to cater for the ongoing growth of the DTH TV market. Launched in the third quarter of 2015, the satellite covers the entire Arab World with exceptionally high power and replaces the (E8WC) gap filler satellite.

Hotspot 25.5° East

With its unique wide coverage and high power, the NOORSAT 1 (E25B) satellite ensures the reach of TV channels and telecom services to the entire Arab World, or to the Middle East, Central Asia and parts of Europe.

All receiving satellite dishes currently pointed at the vicinity of orbital locations 7/8° W and/or 25.5° E, can receive TV programming broadcast by the NOORSAT 7, NOORSAT 7B and NOORSAT 1 satellites, respectively, without the need to re-point or make any modifications. This has been made possible by NOORSAT's access to capacities on both orbital slots and by the establishment of a state-of-the-art ground facility that offers around the clock monitoring and support at NOORSAT's Teleport and Operation Centre.

TV Backhauling

Satellite capacities for backhauling links are available on the NOORSAT 3B (E3B), NOORSAT 4B (E21B) and NOORSAT 5 (IS15) can provide a reliable satellite link that can be used to transmit live content from the customer transmitting facility to NOORSAT's Teleport and Operation Centre and/or to any premises of the customer within the satellite coverage.

Occasional TV

NOORSAT provides around-the-clock Occasional TV Service capacities, enabling customers to connect with up-to-date worldwide events, breaking news, entertainment, political, cultural and sports coverage. Multiple video conferencing can also be achieved.

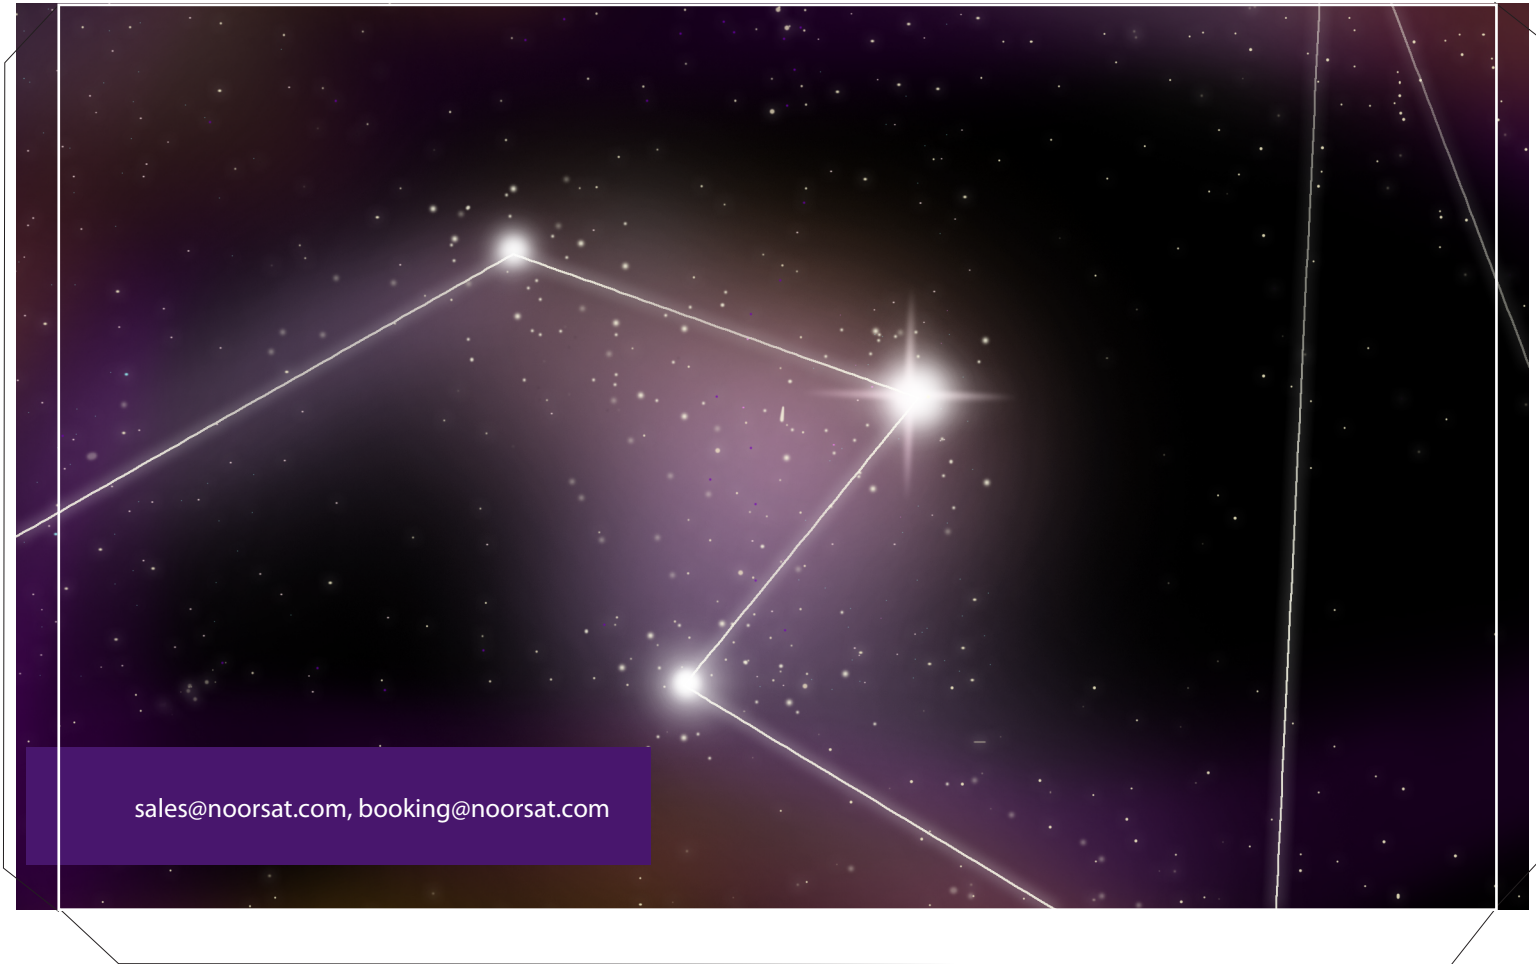

Capacities are available on various satellites at competitive prices and capacity for IP streaming is also available upon a client's request.

Should you have any questions or wish to find out more, please contact our 24/7 Booking Centre at: booking@noorsat.com

Data and Telecom

Dedicated capacity on multiple satellites across NOORSAT's coverage area offers the opportunity for Service Providers to cater for broadband access, data applications, VoIP, GSM backhauling, and VSAT services for private and governmental networks. In addition, NOORSAT provides connectivity to fibre optic networks from different parts of the World.
